This is my *first* document prepared in LaTeX

We have seen that to typeset some bullshit in LaTeX, we type in the text to be typeset together with some LaTeX commands. Words must be separated by spaces (does not matter how many) and lines may be broken arbitrarily.

The end of a paragraph is specified by an *blank line* in the input. In other words, whenever you want to start a new paragraph just leave a blank line and proceed.

Carrots are good for your eyes, since they contain Vitamin A. Have you ever seen a rabbit wearing glasses?

The numbers 1, 2, 3, etc. are called natural numbers. According to Kronecker, they were made by God;all else being the works of Man.

Note the difference in right and left quotes in 'single quotes' and "double quotes".
